WORK EXPERIENCE & PROJECTS

Organization: Adobe Systems India, Noida (Client Location) June 2015 – till date

Project 1: Review & Correction UI Tool (On going)

About: The tool is used to review and correct the tags detected by visual network. User can add, change, delete, group and ungroup the tags. The corrected tags then generate the Adaptive Forms.

Description: Responsible for designing and implementation of the tool from the scratch. Managing 4 people team in the development.

Environment: ReactJS, FabricJS, JavaScript ES6.

Role: Design and Development.

Project 2: Flamingo Tagging Tool

About: The tool is used to tag the different elements of forms represented as image and stores the data at server side. The data collected by this tool is used for different visual networks training.

Description: Responsible for designing and implementation of the tool from the scratch. Added support of batch assignment of pages to the users' bucket. Automated the daily backup of tagged data on different machine. Managing 20+ employees for tagging.

Environment: Java, Angular 1, FabricJS, JavaScript.

Role: Development and maintenance.

Project 3: Adobe Experience Manager (Adaptive Forms)

About: The adaptive forms feature of Adobe Experience Manager (AEM) forms allows you to create engaging, responsive and adaptive forms that automatically render as PDF or HTML5 based on device and browser settings.

Description: Responsible for customers authoring editor using which form is created. Added captcha component in the forms.

Environment: Java, JavaScript, JQuery.

Role: Development and maintenance.

Organization: Analytics Quotient Pvt. Ltd, Bangalore**July 2013 – June 2015****Project 1: Price Check**

About Clients: US based large restaurant chain, pizza chain and their competitors.

Project: **A Tool that compares prices of competitor restaurant brands (casual dining, fast casual dining) and have store level, Item level analysis of prices.**

Description: Handled four to five clients' delivery at a time. Involved in maintenance of existing modules and development of new features.

Environment: Spring, Java, MySQL, JavaScript, JQuery, Apache tomcat.

Role: Development and Maintenance.

Project 2: Campus Quotient

About Client: In-House Tool.

Project: **A Tool built in-house used for recruitment at campuses.**

Description: Designed and developed tool and played a key role in the project.

Environment: Java, MySQL, Spring, JavaScript, JQuery and Apache Tomcat.

Role: Database design and development.
